

GreenVoltage

RAPID CHARGE CYCLE
SILENT OPERATION
COMPLETELY EMISSION FREE
RELIABLE PERFORMANCE
COMPACT, PORTABLE DESIGN

Quick Start Guide: **GV Kube 10k**

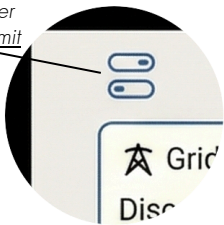

Portable Power Unit — 6 kVA / 10 kWh silent zero-emission system

BASIC OPERATION

Startup: Turn the Battery Isolator to the ON position and press the ON-OFF button. The unit delivers immediate power with no set-up delays.

Charging the System: You can recharge the unit by connecting it to an AC mains supply, solar panels, or both simultaneously. The advanced hybrid charging system minimises downtime, achieving a typical turnaround in just 1.5 hours. Use a Jumper and adjust the input current limit on the screen to charge it slower

Continuous Use: The system supports charging and discharging at the same time, ensuring an uninterrupted power supply.

Remote Monitoring: Thanks to the built-in GPS and 4G LTE, the asset is always online once a SIM CARD is installed or Wifi Settings are added. You can access full system telemetry in real-time, track its precise location, and set up custom geofences for tight security on busy sites through the VRM portal website.

Thank you for choosing the **GV Kube 10K** as your portable power solution.
